PIVOT DOOR

ELEVATE YOUR

ENTRANCE

THE PIVOT DOOR TRANSFORMS ENTRANCES WITH VERSATILE DESIGN AND DRAMATIC IMPACT

Pivot doors redefine the concept of traditional doors with their expansive range of sizes and designs. These doors create a striking entrance every time, offering the flexibility to incorporate larger architectural elements that enhance any space.

TOP PIVOT
PLATE

TOP PIVOT

FritsJurgens® SYSTEM M+

Ease of Operation. Even the largest panels operate with little effort.

Concealed Mechanism. Does not require an invasive installation, mounted into the floor.

Damper Control. Ensures a smooth and elegant closing movement and protects the door from touching walls.

30 Degree Speed Control. Allows you to determine the speed of the last part of the closing movement.

BOTTOM PIVOT

FLOOR PLATE

LATCHBOLT

DEADBOLT

LATCHBOLT

MULTIPOINT LOCK

Automatic Lock Engagement. As soon as the door is pulled shut, the automatic latchbolts engage and are secured.

Deadbolt Latch. By turning the key or the knob, the center deadbolt will engage and lock the top and bottom latchbolts to become a 3-point locking system.

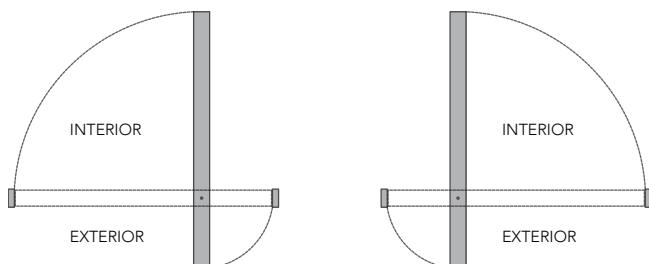

Positive Latching. Other pivot doors use roller latches that can often bounce or blow open.

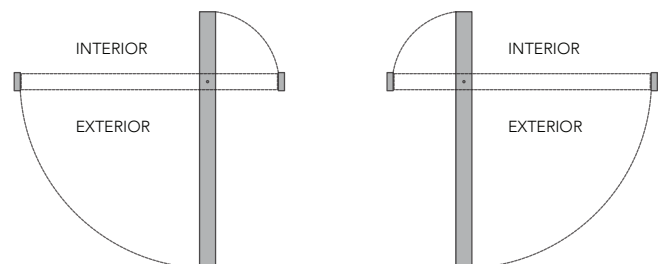

PIVOT DOOR SIZING & OPERATION

With innovative frames and hardware, Weather Shield can create pivots up to 8 feet wide and 14 feet tall. When determining the size of a pivot door, it is important to collaborate with a building design engineer to ensure smooth and effortless operation. Proper installation is critical for the optimal performance of pivot doors.

The pivot system includes top and bottom pivots that allow the door to rotate easily, even with heavy or oversized doors. The off-center pivot hardware is positioned based on size to create a wide opening on one side and a narrower one on the other.

PIVOT DOOR PANEL COLLECTIONS

We offer a variety of pivot door panel designs, featuring sleek aluminum options along with our distinctive artisan wood and metal collections, allowing you to create something truly unique.

ALUMINUM PANEL
Thermally-broken stile and rail door

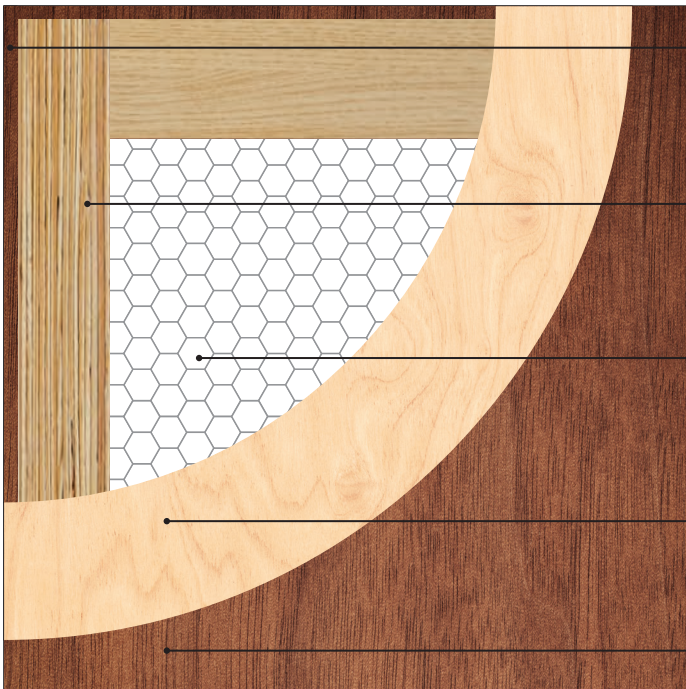

ARTISAN WOOD PANEL
Hardwood with engineered aluminum core

ARTISAN METAL PANEL
Atomized metal applied to engineered door panels

ARTISAN PANEL ANATOMY

HARDWOOD EDGE BAND

Solid hardwood, gives a finish edge to the panel.

ENGINEERED LUMBER STILE AND RAIL BLOCKING

Gives solid mass for hardware prep and prevents warping

AIRCRAFT GRADE ALUMINUM HONEYCOMB CORE

Adds incredible strength and stability while minimizing overall weight of the panel.

MARINE GRADE PLYWOOD

Adds moisture proof durability to the overall panel composite.

THICK HARDWOOD VENEER*

Gives a finish look to the interior and exterior panels.

*Artisan Metal panels use a phenolic resin skin in place of hardwood veneers.

ARTISAN METAL COLLECTION

We make it simple to achieve a highly personalized statement entry-piece, whether intricate or unadorned, aged or polished semi-precious metals.

Introducing our Artisan Metal Collection: Where Craftsmanship Meets Artistry

Discover the unparalleled beauty and craftsmanship of our Artisan Metal Collection, a curated selection of exquisite metalworks that blend traditional techniques with contemporary design.

PANEL FINISHES & TEXTURES

LUNAR

Lunar is an extraordinary surface derived from the moon's crust, composed of a rocky surface covered by a layer of loose, heterogeneous deposits.

Lunar's influence encompasses dust, broken rocks, and other related materials, creating a celestial and ethereal finish that is unlike anything on Earth.

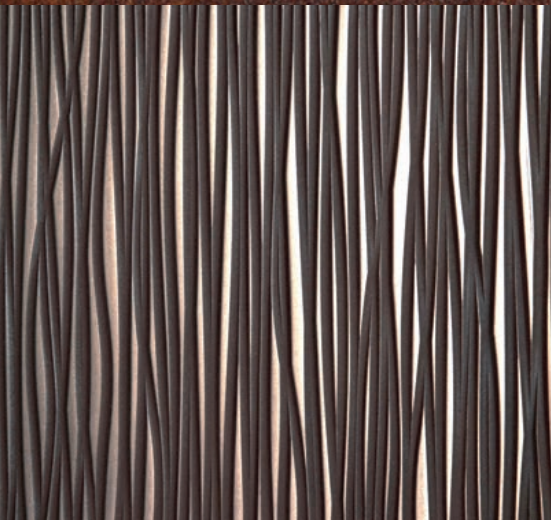

SURFACE: TREASURY BRONZE PEARL PATINA

CAST

Metal casting is a manufacturing process that involves pouring molten metal into a mold to create a multidimensional product. Although the process itself does not require heat, it perfectly emulates the unique texture of metal when it is first cast with fire.

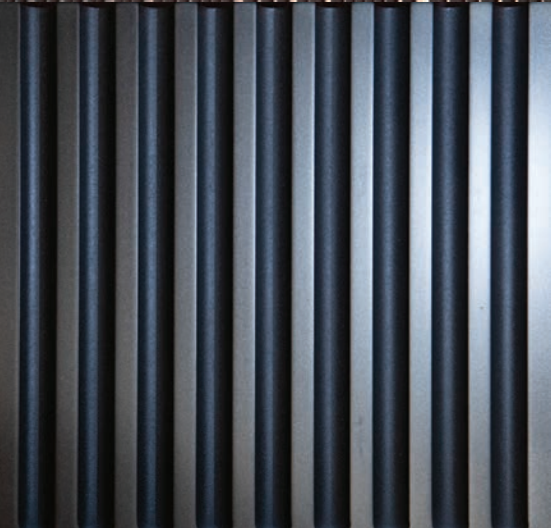

SURFACE: WEATHERED STEEL

CORTEX

Cortex, in its simplest aesthetic, refers to the contrasts between darker and lighter wood grains, which result from varying growth conditions across different seasons in a cut or split piece of wood. This rarity often increases the worth of both the raw materials and the finished product.

SURFACE: BRONZE/BLACK FLORENTINE

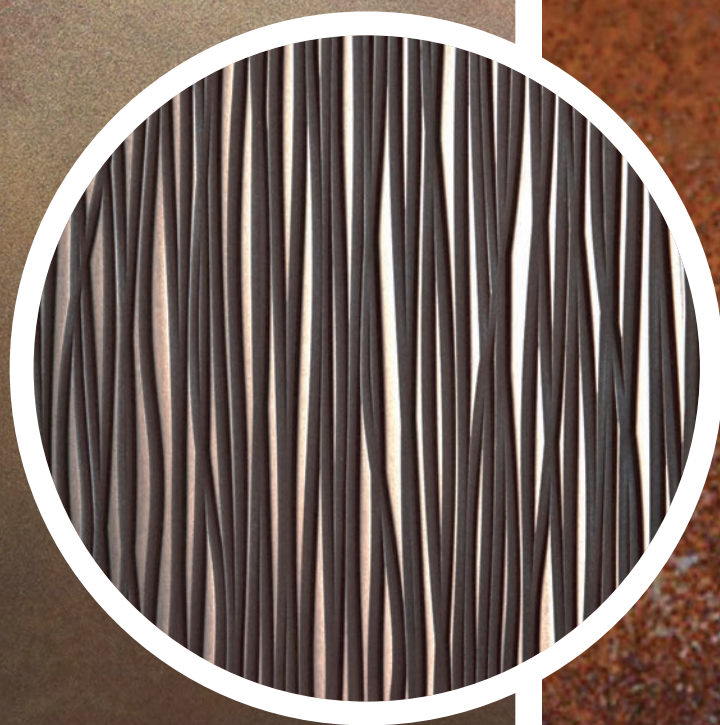

DORIC

Doric texture is inspired by the three orders of ancient Greek and Roman architecture. Believing that Doric columns could bear the most weight, ancient builders often used them as foundations to provide strength, stability, and structural integrity to their constructions.

Doric makes a bold, powerful design statement with its sharp and pronounced straight lines.

SURFACE: ANTHRA ZINC

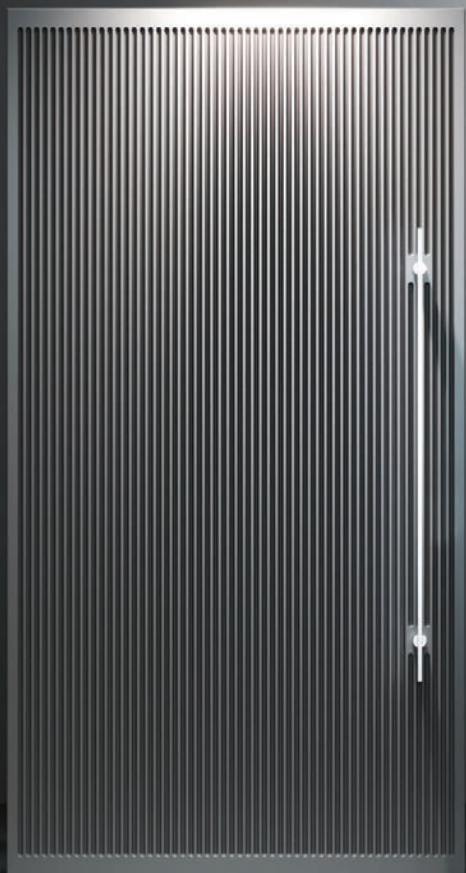

APPLIED METAL

Axolotl specializes in custom surface treatments, offering unique design solutions for architects, designers, and builders. Their innovative techniques use chemical bonding to apply semi-precious metals in a variety of textures and designs, creating surfaces unlike anything you have seen or imagined.

Granulated metals are atomized and bonded to the substrate, with each door polished and finished with a hand-rubbed patina. This meticulous process ensures that every door is truly unique.
